

Dosa and Drinks

INET 3102 - Capstone Project

By Aishwarya Ramkumar

Business Description

- Business Name: Dosa and Drinks
- Fictional dosa restaurant in Minneapolis
- Offers classic & modern dosas + fresh drinks
- Template: W3.CSS Cafe

AWS Service selection

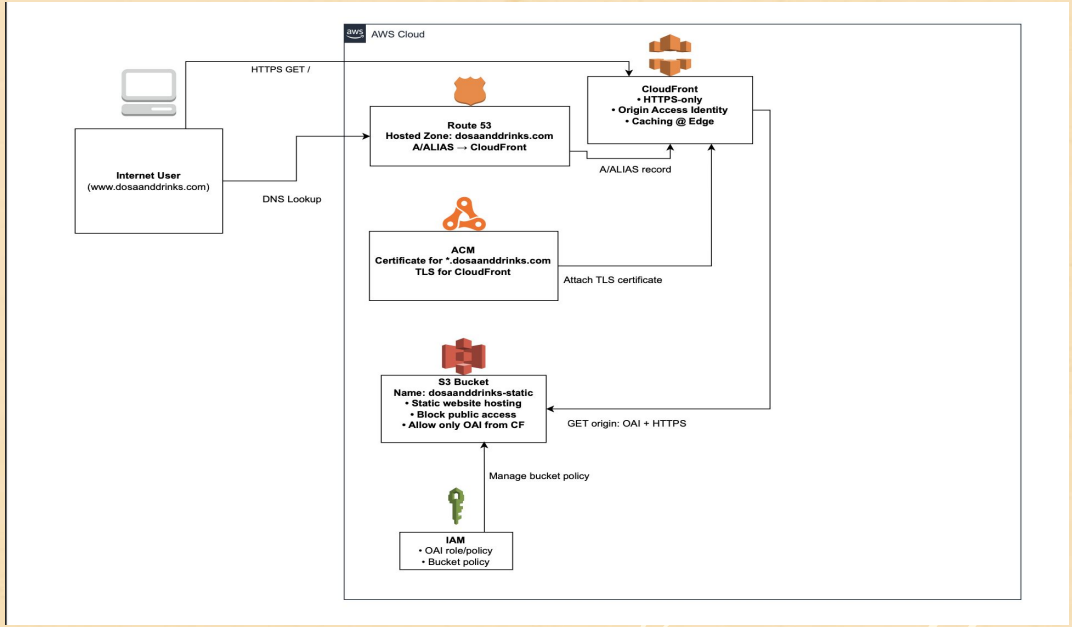

Selected AWS Services:

- Amazon S3: static site hosting (cheap, reliable)
- Amazon CloudFront: CDN (global caching, redundancy)
- Amazon Route 53: DNS (custom domain)
- AWS Certificate Manager: SSL/TLS (HTTPS)
- IAM: access control (restrict bucket access)

Architecture and design

Infrastructure Diagram Consists of:

- User → Route 53 → CloudFront → S3 (static website)
- ACM for TLS on CloudFront
- IAM & OAI for secure origin access

AWS CLI / Instance Connect

Update HTML via EC2 Instance Connect:

1. Connect in-browser: EC2 → Connect → Instance Connect
2. Run sed to replace menu text in /var/www/html/index.html
3. curl localhost to confirm change
4. Verify live site via ALB URL

Networking & Redundancy

Load Balancer & EC2 Failover Test:

1. Site loads via ALB (both instances up)
2. Targets Healthy: dosa-server-1 & dosa-server-2
3. Stop dosa-server-1 → dosa-server-2 remains Healthy
4. Site still live via ALB with one server

THANK YOU
